

Correct Seat Belt Usage and Adjustment

All of our seat belt products carry the certification mark which is your assurance of quality, and when installed in accordance with the instructions supplied, will provide the required degree of protection to the occupant in most accidents. We are one of the major after market suppliers of seat belts in Australia and present the Australian consumer the best products in quality and performance.

WARNING!

Seat belts are designed to bear upon the boney structure of the body, and must be worn low across the front of the pelvis, or the pelvis, chest and shoulders, as applicable. Wearing of the lap section of the belt across the abdominal area must be avoided. Check out our correct seatbelt adjustment guide.

TO GET THE FULL BENEFIT FROM A SEAT BELT IT MUST BE ADJUSTED CORRECTLY

- IT MUST BE FIRMLY ADJUSTED - This is to be consistent with comfort, to provide the protection for which it has be designed. Any slack in the belt will greatly reduce the protection afforded to the occupant wearing it.
- IT MUST NOT BE TWISTED.
- THE LAP PORTION MUST BE WORN ACROSS THE HIPS.
- EACH SEAT BELT MUST RESTRAIN ONLY ONE OCCUPANT - It is dangerous to put a seat belt around a child being carried on an adult's lap.
- DO NOT ALLOW SEAT BELTS TO COME IN CONTACT WITH CHEMICALS - Care should be taken to avoid contamination of the webbing with polishes, oils and chemicals and particularly battery acid.
- CLEAN WITH A DAMP CLOTH using mild soap and water.

REPLACE THE SEAT BELT IF DAMAGED, IS FRAYED, HAS BEEN IN CONTACT WITH CHEMICALS OR WORN IN A SEVERE CRASH.
